

Fertiliser Overview

Biggest compound fertiliser manufacturers in Malaysia and own the first production plant in the world that has the flexibility to produce either Urea or Ammonium Sulphate-based compounds

Our fertiliser business is operated by FGV Fertiliser Sdn. Bhd. (FGVF), which was incorporated in 1975 that serves as the commercial arm on fertiliser manufacturing and sales of FGV Holdings Berhad.

Backed with more than 30 years of industry expertise, FGVF is one of the biggest compound fertiliser manufacturers in Malaysia and own the first production plant in the world that has the flexibility to produce either Urea or Ammonium Sulphate-based compounds, making FGVF a unique and very competitive compound fertiliser producer in the region. The plant was built with the assistance of experts from International Fertiliser Development Centre (IFDC).

FGVF has the capacity to produce more than 600,000 MT of fertiliser annually of various product range to suit customers' requirements. Customers are offered with FGVF's own fertiliser brands such as SunBear, SunFlower and Felda Series including customised formulations.

Fertiliser Products

Compound Fertiliser

Our Compound Fertiliser is uniquely produced, whereby liquidized Urea is incorporated as the basic Nitrogen source in the production of NPK Compound Fertiliser.

We also offer a variety of formulation by using Ammonium Sulphate as an alternative for Nitrogen sources. The compound granules are free flowing and uniform in size, suitable for mechanical and manual application for various type of plants (oil palm, cash crops and others). Product Quality is continuously monitored. FGV Fertiliser Sdn. Bhd. is accredited with ISO 9001:2015, SNI (Indonesia) and SIRIM certifications.
